Global AI Law and Policy Tracker

By IAPP Research and Insights

Countries worldwide are designing and implementing AI governance legislation and policies commensurate to the velocity and variety of proliferating AI-powered technologies. Efforts include the development of comprehensive legislation, focused legislation for specific use cases, national AI strategies or policies, and voluntary guidelines and standards. There is no standard approach toward bringing AI under state regulation, however, common patterns toward reaching the goal of AI regulation can be observed. Given the transformative nature of AI technology, the challenge for jurisdictions is to find a balance between innovation and regulation of risks. Therefore, governance of AI often, if not always, begins with a jurisdiction rolling out a national strategy or ethics policy instead of legislating from the get-go.

This pattern is evident throughout this tracker. The tracker identifies legislative or policy developments or both in a subset of jurisdictions. Such initiatives are either already being deliberated at the country level or are in the process of commencing deliberations in countries across six continents, speaking to the global importance of AI. However, given the rapid and widespread policymaking in this space, the tracker does not include all AI initiatives within every jurisdiction across every continent. This tracker also offers brief commentary on the broader AI context and related developments and identifies laws or policies in parallel professions like privacy.

As individual jurisdictions press ahead with their own frameworks and approaches, they have also doubled down on multilateral efforts to coordinate and cohere different approaches. The Organisation for Economic Co-operation and Development's AI principles have been reaffirmed in many different contexts, including by digital and technology ministers of the G7 countries during the 2023 Hiroshima Summit. UNESCO, the International Organization for Standardization, the African Union and the Council of Europe are all working on or have published multilateral AI governance frameworks. The U.K. government organized the first AI Safety Summit in 2023 for government and industry stakeholders to agree upon, evaluate and monitor the most significant risks from AI.

Tracking, unpacking and governing the complex field of global AI governance law and policy has quickly become a top-tier strategic issue for organizations. The IAPP AI Governance Center will continue to provide AI governance professionals with the content, resources, networking, training and certification needed to respond to the field's complex risks. The IAPP AI Global Law and Policy Tracker has been updated with valuable input from the global community of AI governance professionals, and we continue to welcome feedback and insights from this community.

Last updated January 2026.

Global AI Law and Policy Tracker

This map shows which jurisdictions are in focus and covered by this tracker. It does not represent the extent to which jurisdictions around the world are active on AI governance legislation.

Jurisdictions in focus

Argentina • Australia • Bangladesh • Brazil • Canada • Chile • China • Colombia • Egypt • EU • Hong Kong • India • Indonesia • Israel • Japan
Kenya • Mauritius • New Zealand • Nigeria • Peru • Saudi Arabia • Singapore • South Korea • Taiwan • Turkey • United Arab Emirates • U.K. • U.S. • Vietnam

**Click on the country names above to navigate to their locations in the tracker.*

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
ARGENTINA	Argentina has developed a National AI Plan to help facilitate the use and development of AI in the country. Under Resolution 2/2023, Argentina released recommendations for trustworthy and reliable AI directed at the public sector. Argentina's Public Information Access Agency released a Guide to Responsible AI. This document focuses primarily on four points: "Definition and Characteristics of AI," "Problems and Challenges of AI," "Principles of Transparency and Personal Data Protection," and "Recommendations for Transparency and Data Protection in the Lifecycle of AI." In August 2024, Argentina's congress started debating legislation (Bill 3003-D-2024) to regulate the use of AI. It is modeled in the spirit of the EU AI Act, which uses a risk-based approach to define obligations for providers and deployers of AI-based systems while also heeding Argentina's specific interest in AI innovation. In August 2025, the Bill on Personal Data Protection in Artificial Intelligence Systems (Bill 4243-D-2025) was introduced, aimed at regulating the processing of personal data within Argentina by entities developing or deploying AI systems, regardless of the operator's location.	→ National Big Data Observatory → Secretariat of Innovation, Science and Technology → Undersecretariat of Information and Communication Technologies → Agency of Access to Public Information → National Securities Commission → National Cybersecurity Directorate	→ Federal Plan for the Prevention of Cybercrime and Strategic Management of Cybersecurity (2025-2027) [IN FORCE] → Personal Data Protection Law [IN FORCE] → Law 27699 for the Protection of Individuals with respect to Automatic Processing of Personal Data [IN FORCE] → Central Bank Communication A 7724 [IN FORCE] → Provision 18/2015 Guide to Good Privacy Practices for Application Development [IN FORCE]	• Argentina is a party to the Organization for Economic Co-operation and Development's AI principles. See OECD AI principles and adherents. • Argentina adopted UNESCO's Recommendation on the Ethics of AI. • See Argentina's Digital Agenda 2030. • See Argentina's Fintech Innovation Hub. • Argentina's data protection authority, the Agency of Access to Public Information, published Resolution No. 161/23, which created the Transparency and Protection of Personal Data Program in the use of AI. • The president's chief of staff also issued Administrative Decision No. 750/2023, creating the Interministerial Roundtable on AI. • Argentina was the only G20 nation not to sign onto the Statement on Regulation of AI. • Argentina aims to position itself as a regional AI hub, including plans to expand nuclear power generation to meet the energy demands of new AI data centers. • Argentina endorsed a joint statement on data scraping and the protection of privacy with Canada..

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
AUSTRALIA	Australia is developing an Australian-first AI plan to boost capability with the aim of growing investment, strengthening AI capabilities, boosting AI skills and securing economic resilience. In 2025, the Competition and Consumer Commission published a final report in its Digital Platforms Services Inquiry, examining generative AI impacts on competition and the marketplace. Additionally, the Productivity Commission issued a report warning against over-regulation of AI. In 2024, the Australian Department of Industry, Science and Resources released the Voluntary AI Safety Standard. This standard builds on the 2023 discussion paper "Safe and Responsible AI in Australia" to support and promote consistency among best practices when developing AI. While not mandatory, the standard consists of 10 guardrails, including testing, transparency and accountability requirements. In addition, the department published a proposal paper for introducing mandatory guardrails for AI in high-risk settings, seeking public feedback on guidelines that would address risk and harm from AI, build public trust and provide greater regulatory certainty. Australia's Digital Transformation Agency released its policy for the responsible use of AI in government in 2024. In this document, the government recognizes the potential benefits of AI and notes that the public expects the government to use AI safely and responsibly. According to the policy, government agencies must adopt several governance measures, such as naming an accountable official.	→ Department of Industry, Science and Resources → Commonwealth Scientific and Industrial Research Organisation → Office of the eSafety Commissioner → Office of the Australian Information Commissioner → Competition and Consumer Commission → National AI Centre's Responsible AI Network → National Science and Technology Council	→ Patents Act [IN FORCE] → Copyright Act [IN FORCE] → Privacy Act [IN FORCE] → Data Availability and Transparency Act [IN FORCE] → Consumer Data Right [IN FORCE] → Competition and Consumer Act [IN FORCE] → Compliance and Enforcement Policy for the Consumer Data Right Australia was one of the first countries in the world to adopt AI ethics principles, which include a robust ethics framework: • Developing the AI Ethics Principles • AI Ethics Principles	• Australia is a party to the OECD's AI principles. See OECD AI principles and adherents. • Australia participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • Australia adopted UNESCO's Recommendation on the Ethics of AI. • See the Digital Transformation Agency's 2025-26 Corporate Plan. • The government announced an advisory body of industry and academic experts to help it devise guardrails for "high risk" AI applications. • The Human Technology Institute at the University of Technology Sydney released The State of AI Governance in Australia. • See the National Science and Technology Council's Rapid Response Information Report on Generative AI. • In March 2020, the government released the AI Standards Roadmap: Making Australia's Voice Heard. Developed by Standards Australia and commissioned by the Department of Industry, Science, Energy and Resources, the Roadmap's primary goals include ensuring Australia's influence global AI standards, increasing Australia's international competitiveness regarding responsible AI, and growing Australia's capacity for developing AI best practices. • Australia banned DeepSeek on all federal government devices. • Australia and Singapore signed a memorandum of understanding to deepen cooperation on AI.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
AUSTRALIA, *continued*	Australia released the AI Impact Navigator, a framework for companies to assess and measure impact and outcomes of their AI systems. Moreover, the Information Commissioner published guidance on privacy and developing generative AI models. In November 2024, Australia released a committee report, recommending "new, whole-of-economy, dedicated legislation to regulate high-risk uses of AI" that would mandate guardrails and "establish a monitoring and enforcement regime overseen by an independent AI regulator." Australia amended its Privacy Act, which now requires that organizations disclose when automated decisions are made. See the IAPP's article on the new privacy reform's top operational impacts.			• Australia signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet. • Australia's Privacy Commissioner signed a joint statement on building trustworthy data governance frameworks to encourage the development of innovative and privacy-protective AI. • Australia's Information Commissioner gave a speech in February 2025, emphasizing transparency, regulatory cohesion and regulatory effectiveness in governing AI. • Australia endorsed a joint statement on data scraping and the protection of privacy with Canada. • The Department of Industry, Science and Resources released an AI policy guide and template for organizations.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
BANGLADESH	Bangladesh is looking to advance its AI policies and has published a National AI Strategy for 2019-2024. The strategy includes: • Developing a strategy and development roadmap. • Overcoming challenges to the use of AI. • Leveraging AI for social and economic growth, and more. The Information and Communication Technology Division published a National AI Policy 2024, which envisions establishing Bangladesh as a pioneer in AI innovation and adoption.	→ Information and Communication Technology Division	→ Cyber Security Act [IN FORCE] → Constitution of the People's Republic of Bangladesh [IN FORCE] → Right to Information Act [IN FORCE] → Copyright Act [IN FORCE] → Telecommunications Act [IN FORCE] → Information and Communications Technology Act [IN FORCE] → Personal Data Protection Ordinance [IN FORCE]	• Bangladesh adopted UNESCO's Recommendation on the Ethics of AI. • See Digital Bangladesh Concept Note.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
BRAZIL	Brazil published an AI Strategy, proposing to contribute to ethical AI principles, promote AI research and innovation, train AI professionals, share the country's AI in an international environment, and promote cooperation among the public and private sectors. Brazil also strives to encourage data sharing per its General Data Protection Law, the LGPD, create an AI observatory for measuring impact and disseminate open-source codes for identifying discriminatory trends. Brazil's Senate has approved Bill 2338/2023, a comprehensive AI bill that emphasizes human rights and creates a civil liability regime for AI developers. The Chamber of Deputies will review the bill next. The proposed AI bill would: • Prohibit certain "excessive risk" systems. • Establish a regulatory body to enforce the law. • Create civil liability for AI providers. • Require reporting obligations for significant security incidents. • Guarantee various individual rights, such as explanation, nondiscrimination, rectification of identified biases and due process mechanisms. In July 2023, the country's DPA, the Autoridade Nacional de Proteção de Dados, published a preliminary analysis of Bill No. 2338/2023. Further, the ANPD published its final opinion on Bill 2338/2023, seeking to align the bill with the LGPD.	→ Ministry of Science, Technology and Innovation → ANPD	→ General Data Protection Act [IN FORCE] → Civil Rights Framework for the Internet [IN FORCE] → Consumer Protection Code [IN FORCE] → Copyright Law [IN FORCE] → General Telecommunications Act [IN FORCE]	• Brazil is a party to the OECD's AI principles. See OECD AI principles and adherents. See also this article on Brazil's path to responsible AI. • Brazil participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • Brazil adopted UNESCO's Recommendation on the Ethics of AI. • See Brazil's Digital Transformation Strategy. • The ANPD entered into a technical cooperation agreement with the Development Bank of Latin America "to develop an experimental regulatory tool" for AI-related innovation. • Brazil unveiled a plan to invest USD4 billion in domestic AI capabilities. • The ANDP and France's DPA, the Commission nationale de l'informatique et des libertés, met to strengthen international cooperation on data protection, artificial intelligence and digital education. • Brazil and Nigeria signed a memorandum to strengthen their technological partnership, including collaboration in AI.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
CANADA	Canada's AI and Data Act failed to proceed through the House of Commons. Canada published a code of practice for generative AI development and use in anticipation of the AI and Data Act. The country also issued a Directive on Automated Decision-Making, which imposes several risk-mitigating requirements on the federal government's use of automated decision-making systems. Canada launched its AI Safety Institute in November 2024. CAISI's stated goal is to advance the science of AI safety, ensuring that AI is used safely and can be trusted by its citizens. Canada's Competition Bureau released a report in January 2025 containing its public consultation findings on how AI will affect competition in Canada. The report found that AI's rapid growth creates a host of opportunities, but risks and concerns over anti-competitive conduct are also implicated; moreover, the efficacy of existing antitrust laws in this context remains to be seen.	→ Ministry of Innovation, Science and Economic Development → Canadian Institute for Advanced Research → Office of the Privacy Commissioner of Canada → Standing Committee on Industry and Technology → Advisory Council on AI → AI Safety Institute	→ Personal Information Protection and Electronic Documents Act [IN FORCE] → Privacy Act [IN FORCE] → Consumer Product Safety Act [IN FORCE] → Food and Drugs Act [IN FORCE] → Motor Vehicle Safety Act [IN FORCE] → Bank Act [IN FORCE] → Human Rights Act [IN FORCE] → Criminal Code [IN FORCE] → Quebec's Law 25: An Act to modernize legislative provisions as regards the protection of personal information [IN FORCE] → Genetic Non-Discrimination Act [IN FORCE] → Copyright Act [IN FORCE]	• Canada is a party to the OECD's AI principles. See OECD AI principles and adherents. • Canada participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • As part of the G7, Canada endorsed the 11 Hiroshima Process International Guiding Principles for Advanced AI systems. • Canada adopted UNESCO's Recommendation on the Ethics of AI. • According to its Pan-Canadian AI Strategy, Canada plans to achieve an AI ecosystem founded on Commercialization, Standards, and Talent and Research. In achieving these goals, Canada has established three AI institutes: Amii in Edmonton, Mila in Montreal and the Vector Institute in Toronto. • In 2019, the House of Commons' Standing Committee on Industry, Science and Technology issued a report including recommendations regarding copyright protection for AI-generated works. • In September 2024, a collaborative effort between researchers from Canada, the U.K. and U.S. explored the risks and benefits of utilizing AI in the nuclear industry. • Canada joined Australia, Japan, the U.K. and U.S. in drafting a set of principles to guide adoption of AI in the telecommunications industry. These principles focused on AI growth, security and overall societal benefits. • Canada signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
CANADA, *continued*				• The Ministry of Innovation, Science and Economic Development released a guide for managers of AI systems to support implementation of the Voluntary Code of Conduct for Advanced Generative Artificial Intelligence Systems. • In 2024, the House of Commons' Standing Committee on Human Resources, Skills and Social Development and the Status of Persons with Disabilities issued a report on the Implications of Artificial Intelligence for the Canadian Labour Force. • The Canadian government established the AI and Data Standardization Collaborative to ensure the responsible use of data and AI through standards development. • Canada's Privacy Commissioner released the Principles for responsible, trustworthy and privacy-protective generative AI technologies. • Canada endorsed a joint statement on data scraping and the protection of privacy.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
CHILE	In October 2021, Chile published its first National Policy and Action Plan on AI. The country's former Minister of Science, Technology, Knowledge and Innovation Andrés Couve explained the policy is built on the following: • Development of enabling factors • Use and development of AI technology • Ethics and safety aspects In May 2024, Chile introduced draft AI legislation that promotes AI while ensuring human rights. The risk-based legislation also promotes self-regulation.	→ Agency for the Protection of Personal Data → Ministry of Science, Technology, Knowledge and Innovation → Commission on Future Challenges, Science, Technology and Innovation → National Research and Development Agency → National Center for AI Research → Chilean Transparency Council → National Consumers Agency	→ Law 21,719 on the Protection of Personal Data [IN FORCE] → Digital Economy Partnership Agreement [IN FORCE] → Political Constitution of the Republic of Chile [IN FORCE] → Law No. 19,628 on the Protection of Private Life [IN FORCE] → Law No. 20,285 on the Transparency of Public Functions and Access to Information on Public Administration [IN FORCE] → Law 21,180 on Digital Transformation of the State [IN FORCE] → Industrial Property Law No. 19,039 [IN FORCE] → Law No. 17,336 on Intellectual Property [IN FORCE] → Fintech Law [IN FORCE] → Bill 17,590-05 that creates the National Data Management System [DRAFT]	• Chile is a party to the OECD's AI principles. See OECD AI principles and adherents. • Chile participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • Chile adopted UNESCO's Recommendation on the Ethics of AI. • See Chile's 2035 Digital Transformation Strategy. • In 2023, Chile hosted the first Latin American and Caribbean Ministerial and High-Level Summit on the Ethics of AI with support from UNESCO and CAF. • The Inter-American Development Bank supported the Chilean government's project to develop new transport technology applications, specifically focusing on big data and autonomous vehicles. • On 11 Feb. 2025, Chile endorsed the Paris Charter on Artificial Intelligence. The charter recognizes principles of openness, collaboration, accountability and transparency in AI governance. • Chile signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet. • Chile is building data centers and launching new AI initiatives; the country also ranks first in the 2024 Latin American AI Index. At the same time, Chile exemplifies the various policy tensions inherent to AI development.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
CHINA	China has been proactive in adopting legislation and regulations around the use of AI, with several national laws currently in place. Currently, the laws, regulations and policies governing AI in China are specific to AI use cases: • Algorithmic Recommendation Management Provisions [IN FORCE] • Interim Measures for the Management of Generative AI Services [IN FORCE] • "Administrative Provisions on Deep Synthesis in Internet-Based Information Services" or "Deep Synthesis Provisions" [IN FORCE] • AI guidelines and summary of regulations [IN FORCE] • Scientific and Technological Ethics Review Regulation [IN FORCE] • Next Generation AI Development Plan [IN FORCE] • Measures for Labeling of AI-Generated Synthetic Content [IN FORCE] • Security Management Measures for the Application of Facial Recognition Technology [IN FORCE] • Measures for Ethical Management Services of Artificial Intelligence Science and Technology [DRAFT] China established an AI standards committee, drawing members from industry, such as Baidu, Alibaba and Tencent. It also issued a guideline to accelerate AI Plus Integration.	→ Cyberspace Administration of China → Ministry of Industry and Information Technology → Ministry of Public Security → State Administration for Market Regulation → National Development and Reform Commission	→ Cybersecurity Law [IN FORCE] → Data Security Law [IN FORCE] → Personal Information Protection Law [IN FORCE] → Shenzhen Special Economic Zone AI Industry Promotion Regulation [IN FORCE] → Copyright Law [IN FORCE] → Patent Law [IN FORCE] → Trademark Law [IN FORCE]	• China is a party to the G20 AI Principles, which are drawn from the OECD's AI principles. See OECD AI principles and adherents. • China participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • China adopted UNESCO's Recommendation on the Ethics of AI. • See China's AI development plan. • See the Ministry of Science and Technology's 2021 AI governance document on ethical norms for AI use. • China led a successful UN resolution on AI. • In July 2024, China released the Shanghai Declaration on Global AI Governance, which calls for global cooperation in developing AI "while ensuring safety, reliability, controllability and fairness in the process, and ... leveraging AI technologies to empower the development of human society." • In September 2024, China released the AI Safety Governance Framework as part of its Global AI Governance Initiative. This framework lays out China's objectives for international cooperation on AI governance as well as its view on the risks AI poses to safety.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
CHINA, *continued*	China's State Administration for Market Regulation and the Standardization Administration released three national standards to improve generative AI security: • Generative AI data annotation security specification • Security specification for generative AI pre-training and fine-tuning data • Basic security requirements for generative AI service			• China's AI development depends on imported advanced-computing chips, which the U.S. has sought to deny access to (though the country has relented somewhat), in addition to developing its domestic advanced chip production capacity. In November 2024, the TSMC complied with an export stop order from the U.S. Department of Commerce after their chips were found in a Huawei AI processor. Chinese model DeepSeek, nevertheless, developed a cutting-edge model that benchmarks with OpenAI's most advanced models. Its developer did so with limited access to imported chips and at a much lower cost. • Relatedly, China launched an investigation into Nvidia, finding the chipmaker violated anti-monopoly law. • Former U.S. President Joe Biden and President Xi Jinping met in November 2024 to discuss the need to address and mitigate risks around the use of AI. • China's AI prowess has influenced the Trump administration's approach to AI and industrial policy. • China signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet. • China endorsed a joint statement on data scraping and the protection of privacy with Canada.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
COLOMBIA	Colombia has various policies addressing AI governance, including the following: • National AI Policy • AI Expert Mission • National Policy for Digital Transformation and AI • Projects on Digital Transformation and the Public Sector Bill of Law No. 422 promotes AI R&D, classifies AI risk and sets out a liability framework. It also names the Ministry of Science, Technology and Innovation as the primary AI regulator.	→ Administrative Department of the Presidency of the Republic → Development Bank of Latin America and the Caribbean → Ministry of Information and Communication Technologies → Ministry of National Education → Ministry of Science, Technology and Innovation → National Planning Department → Superintendence of Industry and Commerce → AI Task Force	→ Personal Data Protection Law (Law 1581) [IN FORCE] → Decree 1377 [IN FORCE] → Habeas Data Law, Law 1266 amended by Law 2157 [IN FORCE] → Decree 338 [IN FORCE] → Consumer Protection Law (Law 1480) [IN FORCE] → Copyright Law (Law 23) [IN FORCE]	• Colombia is a party to the OECD's AI principles. See OECD AI principles and adherents. • Colombia also adopted UNESCO's Recommendation on the Ethics of AI. • Colombia published an Ethical Framework that reiterates best practices, suggestions and recommendations on how best to integrate ethical principles into the use of AI, especially for the benefit of public sector entities. An AI Task Force was created in partnership with the CAF to bolster AI implementation. • Colombia endorsed a joint statement on data scraping and the protection of privacy with Canada.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
EGYPT	Egypt's National AI Strategy focuses on four pillars: • AI for government • AI for development • Capacity building • International activities The country's other initiatives include an AI roadmap and Charter for Responsible AI. In January 2025, Egypt's Ministry of Communications and Information Technology released the second edition of its National AI Strategy, which outlines the nation's projected strategic intent for the development and implementation of AI over the next five years.	→ National Council for AI → Ministry of Communications and Information Technology	→ Law No. 151 of 2020 on the Protection of Personal Data [IN FORCE] → Law No. 175 of 2018 Regarding Anti-Cyber and Information Technology Crimes [IN FORCE] → Law No. 10 of 2003 Telecommunication Regulation Law [IN FORCE] → Law No. 82 of 2002 on the Protection of Intellectual Property Rights [IN FORCE]	• Egypt is a party to the OECD's AI principles. See OECD AI principles and adherents. • Egypt adopted UNESCO's Recommendation on the Ethics of AI. • Egypt chaired several meetings for the Arab AI Working Group, which promotes discussion of AI strategies among representatives from Arab countries. See the group's chair election, second meeting and third meeting. • See the Applied Innovation Center. • The Senate Education Committee urged the issuance of a document to evaluate the ethics and controls of AI in Egypt.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
EU	On 1 Aug. 2024, the EU AI Act entered into force. Various dates for compliance will apply in the coming years, with the first applications of the act in early 2025 and the last at the end of 2030. On 2 Feb. 2025, the first set of obligations came into force. In brief, the act: • Creates harmonized rules for placing AI on the EU market. • Applies to the EU and any third-country providers and deployers that place AI systems on the EU market. • Centers around a risk-based approach. • Prohibits use of certain AI systems and provides specific requirements for high-risk systems. • Creates harmonized transparency rules for certain AI systems. Currently, the following obligations are in place: • Organizations will need to ensure employees have access to AI literacy. • The prohibition on certain AI systems is in force. • Guidance on the definition for AI systems has been published. • The EU published the third draft of the General-Purpose AI Code of Practice in consultation with independent experts and stakeholders.	→ EU AI Office → EU AI Board → European Data Protection Board → Special Committee on AI in a Digital Age → EDPB's ChatGPT Task Force → Member states must establish or designate a Market Surveillance Authority, and a Notifying Authority by 2 Aug. 2025, though compliance with this deadline has been inconsistent. → Member state AI authorities include: - Agency for Digital Government (Denmark) - Innovation Agency & Communications Regulatory Authority (Lithuania) - National Commission for Data Protection (Luxembourg)	→ General Data Protection Regulation [IN FORCE] → Digital Services Act [IN FORCE] → Digital Markets Act [IN FORCE] → AI Liability Directive [DROPPED] → Cyber Resilience Act [IN FORCE] → Ethics guidelines for trustworthy AI [IN FORCE] → New Product Liability Directive [ENACTED] → Data Act [IN FORCE]	• The EU is a party to the OECD's AI principles. See OECD AI principles and adherents. • The EU participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • As a nonenumerated member of the G7, the EU endorsed the 11 Hiroshima Process International Guiding Principles for Advanced AI systems. • The EU also adopted UNESCO's Recommendation on the Ethics of AI. • See the EU's approach and timeline for AI development. • As part of a regulatory simplification agenda, EU institutions are considering whether to implement a pause on the AI Act and whether other changes are appropriate. See the EU Commission's Digital Omnibus on AI Regulation Proposal. • Member states and the European Commission worked to create a Coordinated Plan on AI in 2018. This plan includes a table showcasing how 23 of 27 EU countries, as well as Norway and Switzerland, have progressed with their national strategies. The coordinated plan was updated in 2021.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
EU, *continued*	The EU committed to investing 200 billion euros in AI through InvestAI initiative, with 20 billion euros earmarked for AI gigafactories. The first wave of factories was designated in December 2024 and the second wave in March 2025. This initiative was later expanded upon in the Commission's AI Continent Action Plan, which seeks to strengthen the EU's AI capabilities. As part of this plan, the Commission will open an AI Act Service Desk to ensure smooth implementation of the AI Act. The IAPP and its partners have worked diligently to analyze the EU AI Act and its implications for organizations. For more insight, check out the IAPP series on the top 10 operational impacts of the EU AI Act and the EU AI Act: 101.	- Digital Innovation Authority & Information Data Protection Commission (Malta) - AI Supervisory Agency (Spain) → Member state DPAs include: - Commission nationale de l'informatique et des libertés (France) - Bundesbeauftragter für Datenschutz und Informationsfreiheit (Germany) - Garante Per La Protezione Dei Dati Personali (Italy) - Agencia Española de Protección de Datos (Spain) - Autorité de protection des données (Belgium) - Urząd Ochrony Danych Osobowych (Poland) - Datenschutzbehörde (Austria) - Nemzeti Adatvédelmi és Információszabadság Hatóság (Hungary)		• In January 2024, the European Commission decided to establish an EU AI Office to play a key role in implementing the AI Act, foster the development and use of trustworthy AI, and promote international cooperation. • The EU and several other countries signed onto the Council of Europe's Framework Convention on AI and human rights, democracy and the rule of law. • Some EU member states have national AI strategies, many of which emphasize research, training and labor preparedness, as well as multistakeholder and international collaboration. For example, France's national AI strategy lays out three main objectives: - Improve the AI education and training ecosystem. - Establish an open data policy for implementing AI applications and pooling assets. - Develop an ethical framework for fair and transparent use of AI. • The EU and Singapore signed an agreement to strengthen cooperation between the AI Office and Singapore's AI Safety Institute. • DeepSeek has been investigated by several European authorities. • The EU signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
HONG KONG	Hong Kong aims to balance AI innovation with responsibility, creating a contextual governance framework built for local characteristics. The region governs AI through existing sectoral law and various governance frameworks. These include: • The Ethical AI Framework • Guidance on the Ethical Development and Use of AI • AI: Model Personal Data Protection Framework • Checklist on Guidelines for the Use of Generative AI by Employees • Generative AI Technical and Application Guideline	→ Digital Policy Office → Privacy Commissioner for Personal Data → Hong Kong Monetary Authority → Financial Services and Treasury Bureau → Securities and Futures Commission → Intellectual Property Department → Equal Opportunities Commission → Hong Kong Generative AI R&D Center → Smart Government Innovation Lab	→ Personal Data Privacy Ordinance [IN FORCE] → Copyright Ordinance [IN FORCE] → Sex Discrimination Ordinance [IN FORCE] → Race Discrimination Ordinance [IN FORCE] → Family Status Discrimination Ordinance [IN FORCE] → Protection of Critical Infrastructure (Computer Systems) Ordinance [IN FORCE]	• Hong Kong's Commerce and Economic Development Bureau and its Intellectual Property Department began a public consultation process to assess potential updates to copyright laws in view of AI developments. • The Financial Services and Treasury Bureau released a Policy Statement on Responsible Application of AI in the Financial Market, and the Securities and Futures Commission released a Circular on the Use of Generative AI Language Models. • Hong Kong Monetary Authority released a circular on Consumer Protection in respect of Use of Generative AI and the Insurance Authority issued Conduct in Focus: Chatting About Chatbots and AI.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
INDIA	A proposed Digital India Act would replace the IT Act of 2000 and regulate AI, emphasizing accountability, safety and privacy. The Indian government has advocated for a robust, citizen-centric and inclusive "AI for all" environment. A task force was established to make recommendations on ethical, legal and societal issues related to AI, and to establish an AI regulatory authority. According to its National Strategy for AI, India hopes to become what it calls an "AI garage" for emerging and developing economies where scalable solutions can be easily implemented and designed for global deployment. MeitY released the India AI Governance Guidelines in November 2025, which outlines key principles, issues and recommendations, a government action plan, and practical guidelines for industry actors, all to spur safe and trustworthy AI innovation. NITI Aayog published two AI policy documents in 2021, discussing principles and the operationalization of responsible AI. India's government is open to new regulation for AI, but wants to achieve consensus. To this effect, India released a report on AI governance guidelines, pointing to recommendations for a future regulatory framework. At the same time, India is developing standards for organizations that lay out benchmarks for reliability, explainability, transparency, privacy and security. In November 2024, India released the Developer's Playbook for Responsible AI in India, detailing the government's unified industry framework for AI risk identification and mitigation.	→ NITI Aayog → Ministry of Electronics and Information Technology → Ministry of Commerce and Industry → AI Task Force	→ Information Technology Act [IN FORCE] → The Information Technology Rules [IN FORCE] → Competition Act [IN FORCE] → Motor Vehicles Act [IN FORCE] → Digital Personal Data Protection Act [IN FORCE] → Copyright Act [IN FORCE] → National e-Governance Plan [IN FORCE]	• India is hosting the AI Impact Summit in February 2026, envisioning AI that advances humanity, fosters inclusive growth and safeguards the planet. • India is a party to the G20 AI Principles, which are drawn from the OECD's AI principles. See the OECD AI principles and adherents. • India participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • India adopted UNESCO's Recommendation on the Ethics of AI. • Funded by MeitY, the AI Research, Analytics and Knowledge Dissemination Platform is a supercomputer which empowers academia, research labs, the scientific community, industry and startups to develop AI-enabled solutions tailored to India-specific challenges. • India AI, a MeitY initiative, aims to foster AI innovation. • India signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet. • India has emphasized development of open-source digital public infrastructure, including Aadhaar, a digital identification system that enables access to banking, health care and government benefits.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
INDIA, *continued*	MeitY released an AI advisory requiring that platforms ensure their AI models do not disseminate unlawful content or threaten the electoral process.			
INDONESIA	In 2020, Indonesia released the National Strategy on AI as part of the AI Towards Indonesia's Vision 2045. The following five national priorities were outlined as where AI is anticipated to have the biggest impact: • Health services • Bureaucratic reform • Education and research • Food security • Mobility and smart cities Indonesia adopted a Circular on AI Ethics. While not binding, it provides a reference point for formulating and establishing internal organizational policies for use of AI in Indonesia's public and private sectors. Since issuing the circular, the Ministry of Communication and Informatics committed to preparing specific regulations regarding AI use and development. In January 2025, the government announced that it was in the process of developing robust AI regulation. The Ministry of Communication and Digital Affairs announced that the government is preparing an AI Roadmap to address technological impacts and national competitiveness.	→ Ministry of Communication and Digital Affairs → Ministry of Research, Technology and Higher Education → National Cyber and Crypto Agency	→ Law No. 27 of 2022 on Personal Data Protection [IN FORCE] → Law No. 1 of 2024 Electronic Information and Transaction Law [IN FORCE] → Law No. 36 of 1999 regarding Telecommunications [IN FORCE] → Law No. 14 of 2008 on Public Information Transparency [IN FORCE] → Law No. 28 of 2014 on Copyright [IN FORCE]	• Indonesia is a party to the G20 AI Principles, which are drawn from the OECD's AI principles. See OECD AI principles and adherents. • Indonesia participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • Indonesia also adopted UNESCO's Recommendation on the Ethics of AI. • See Indonesia's roadmap for industry, Making Indonesia 4.0. • Indonesia's Ministry of Communications and Informatics has partnered with UNESCO and completed an AI Readiness Assessment. • Indonesia signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.

ISRAEL	In April 2025, the Ministry of Innovation, Science and Technology, the Israel Innovation Authority, and others published a National Program for AI with objectives including developing AI infrastructure, expanding the use of AI in the public sector and strengthening Israel's geotechnological position in AI. Based on a policy for regulation and ethics in AI, Israel wants to form a uniform risk-management tool, establish a governmental knowledge and coordination center and maintain involvement in international regulation and standardization. In general, voluntary standardization, sector-based self-regulation and modular experimentation tools, e.g., sandboxes, will be favored over a lateral framework. The following resources are available for policy guidance: • Israeli AI Regulation and Policy White Paper: A First Glance • Harnessing Innovation: Israeli Perspectives on AI Ethics and Governance • Policy on AI Regulations and Ethics In September 2024, Israel's Ministry of Innovation, Science and Technology called for experts to assist in AI policy development. In November 2024, the government released a report for public comment on the use of AI in the private sector. The report advocates development of AI in finance. In April 2025, Israel's Privacy Protection Authority released draft guidance for AI governance and privacy. This document summarizes obligations when using personal data in the context of AI tools.	→ Ministry of Innovation, Science and Technology → Ministry of Justice → Privacy Protection Authority → Israel National Cyber Directorate	→ Basic Law: Human Dignity and Liberty [IN FORCE] → Protection of Privacy Law amended by Amendment No. 13 [IN FORCE] → Data Security Regulations [IN FORCE] → Credit Data Law [IN FORCE] → Copyright Act [IN FORCE]	• Israel is a party to the OECD's AI principles. See OECD AI principles and adherents. • Israel participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • Israel's Ministry of Justice issued an opinion that machine learning will fall under the fair-use provision in the country's Copyright Act. • Israel and several other countries signed onto the Council of Europe's Framework Convention on AI and human rights, democracy and the rule of law. • Israel endorsed a joint statement on data scraping and the protection of privacy with Canada.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
JAPAN	In 2022, Japan released a National AI Strategy. Japan promotes the notion of "agile governance," whereby the government provides nonbinding guidance and defers to the private sector's voluntary efforts to self-regulate. To this effect, Japan's government enacted a new AI Promotion Act in May 2025. This law presents a light touch on regulation and seeks to further AI innovation by requiring companies to cooperate with government safety measures. Further, when a company's use of AI involves the violation of human rights, the law permits the government to publicly list the name of the company involved. The following white papers have been issued for policy guidance: • AI Governance in Japan Ver. 1.1 • Governance Guidelines for Implementation of AI Principles • AI Utilization Guidelines, an initiative for implementing the OECD AI Principles In 2023, the AI Strategy Council released draft AI Operator Guidelines, which clarify how operators should develop, provide and use AI. In September 2024, Japan's AI Safety Institute released two policies governing AI usage and development. The Guide to Red Teaming Methodology on AI Safety educates developers on adversarial techniques they can use to improve the safety of their AI models. The Guide to Evaluation Perspectives on AI Safety provides basic concepts for developers to use when conducting AI safety evaluations. These documents were drafted as a part of Japan's Hiroshima AI Process initiative.	→ Ministry of Economy, Trade and Industry → Council for Science, Technology and Innovation → Personal Information Protection Commission → Fair Trade Commission → AI Safety Institute	→ Improving Transparency and Fairness of Digital Platforms Act [IN FORCE] → Financial Instruments and Exchange Act [IN FORCE] → Protection of Personal Information Act [IN FORCE] → Antimonopoly Act [IN FORCE] → Product Liability Act [IN FORCE] → Copyright Law [IN FORCE]	• Japan is a party to the OECD's AI principles. See OECD AI principles and adherents. • Japan participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • As part of the G7, Japan endorsed the 11 Hiroshima Process International Guiding Principles for Advanced AI systems. • Japan also adopted UNESCO's Recommendation on the Ethics of AI. • The Social Principles of Human-Centric AI, drafted by the Council for Social Principles of Human-Centric AI, describes AI's role in Japan's "Society 5.0" and advocates that AI should be human-centric; promote education/literacy; protect privacy; ensure security; maintain fair competition; ensure fairness, accountability and transparency; and promote collaborative innovation. • Minister of Education, Culture, Sports, Science and Technology Keiko Nagaoka declared the country's copyright laws cannot be enforced on materials used in AI training datasets. This announcement reflects a 2018 amendment to Japan's Copyright Act. • Japan's Ministry of Economy, Trade and Industry introduced the Contract Guidelines for AI and Data Use to assist parties involved in AI business transactions. • See the Draft AI Research and Development Guidelines for International Discussions.

JAPAN, *continued*	In October 2024, the Japan Fair Trade Commission released a Request for Information about the rapidly evolving generative AI market. In its subject discussion paper, the JFTC addressed businesses involved in three market layers: infrastructure, such as computing resources; model, i.e., developers of generative AI models; and application, i.e., services using generative AI. In February 2025, the Office of the Prime Minister's AI Strategic Council Released an interim report. The council highlighted several intervention points: balancing innovation and risk, promoting international cooperation, strengthening government's strategic capacity, improving safety and developing AI procurement guidelines.			• See the AI Guidelines for Business, which call for executive level responsibility of AI governance. • Japan signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.
KENYA	Kenya released a National AI Strategy in 2025 centered around digital infrastructure, data, and research and innovation. In 2024, Kenya's Bureau of Standards released a Draft Information Technology AI Code of Practice for AI Applications to assist organizations with the responsible development and use of AI. A draft Robotics and AI Bill has been floated by the Robotics Society of Kenya.	→ The Ministry of Information, Communications and the Digital Economy → Distributed Ledgers Technologies and AI Taskforce	→ Data Protection Act [IN FORCE] → Computer Misuse and Cybercrimes Act [IN FORCE] → Consumer Protection Act [IN FORCE] → Industrial Property Act [IN FORCE]	• Kenya's ICT Action Network published a white paper titled AI for Inclusive Development: Guiding Kenya's Policy Landscape, which promoted a national AI strategy, multistakeholder initiatives, trust building, an adaptive regulatory approach, AI-education and skill building, among other recommendations.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
MAURITIUS	Mauritius published an AI Strategy in 2018. The strategy describes the benefits and challenges of AI, specifically how AI impacts the country's various industries, and sets out a clear vision for development of AI. Other initiatives from the Mauritius government include: • Innovative Mauritius • AI for Agriculture project	→ Ministry of Information Technology, Communication and Innovation → Ministry of Finance, Economic Planning and Development → Emerging Technologies Council → Research and Innovation Council → Data Protection Office	→ Financial Services (Robotic and AI Enabled Advisory Services) Rules [IN FORCE] → Data Protection Act [IN FORCE] → National Cyber Security Strategy [IN FORCE] → Cybersecurity and Cybercrime Act [IN FORCE] → Industrial Property Act [IN FORCE] → Copyright Act [IN FORCE] → Protection against Unfair Practices (Industrial Property Rights) Act [IN FORCE]	• Mauritius also adopted UNESCO's Recommendation on the Ethics of AI. • See the Digital Mauritius 2030 strategic plan and A Blueprint for Mauritius – A Bridge to the Future. • In 2019, the Minister of Technology, Communication and Innovation officially opened the workshop Leading Innovation in Business and Government Services through AI, which is organized by the Mauritius Research and Innovation Council. • Members of the government announced plans to establish an AI Office to set standards for data collection and security and development of Digital Public Infrastructure to facilitate mobile money solutions.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
NEW ZEALAND	New Zealand released its AI Strategy, Investing with Confidence, in July 2025, as well as guidance for businesses. Many New Zealand government agencies are signatories to the Algorithm Charter, which sets out a series of ethical commitments around the development and use of algorithms. The charter provides a risk matrix to assess the likelihood and impact of algorithmic applications. The New Zealand government generally prioritizes trustworthy and human-centric AI development. Although there is no comprehensive AI regulation in New Zealand, the current Privacy Act 2020 applies to the use of AI systems in the country. The Office of the Privacy Commissioner issued guidance on compliance with privacy law when using AI tools, as well as a summary. Further, the Office of the Privacy Commissioner published the Privacy Commissioner's expectations around generative AI in June 2023. In July 2024, New Zealand's Ministry of Business, Innovation and Employment released a cabinet paper that outlines its approach to AI regulation. In it, the ministry noted, "we need to state our support for increased uptake of AI in New Zealand and be clear that we will take a light-touch, proportionate and risk-based approach to AI regulation." The AI Forum of New Zealand published a set of guiding Trustworthy AI in Aotearoa AI principles designed to provide direction for AI stakeholders. In July 2025, New Zealand's Privacy Commissioner issued the Biometric Processing Privacy Code 2025, which likely impacts some AI use cases.	→ Ministry of Business, Innovation and Employment → Statistics New Zealand → Office of the Privacy Commissioner → Department of Internal Affairs	→ Privacy Act [IN FORCE] → Bill of Rights Act [IN FORCE] → Treaty of Waitangi [IN FORCE] → Human Rights Act [IN FORCE] → Principles of Māori Data Sovereignty → Māori Data Governance Model	• New Zealand is a party to the OECD's AI principles. See OECD AI principles and adherents. • New Zealand also adopted UNESCO's Recommendation on the Ethics of AI. • The New Zealand government released AI cornerstones, which will inform an eventual national AI strategy. • See the AI Forum New Zealand. • "An example of governance for AI in health services from Aotearoa New Zealand" has been recognized for its approach in the health sector, particularly in terms of prioritizing the voice of Māori. • The Department of Internal Affairs published initial advice on generative AI in the public service. • In February 2025, New Zealand Internal Affairs released guidance for the responsible use of generative AI for the public service. The document focuses on safety, privacy and accountability for generative AI implementations. • New Zealand signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet. • New Zealand endorsed a joint statement on data scraping and the protection of privacy with Canada.

NIGERIA	In April 2024, Nigeria hosted a workshop to devise a national AI strategy where Minister of Communications, Innovation and Digital Economy Bosun Tijani stated that the country's goal is to become a key player in global regulation and development of AI. In September 2025, the country released its national AI strategy, which recognizes the benefits and risks of widespread adoption of AI. Nigeria plans to address the ethical issues of using AI while embracing it as a driver of socioeconomic growth. In late 2024, the Nigerian House of Representatives introduced a bill to regulate AI usage. According to commentators, this is the third such bill to descend from the House, causing legislators to call for harmonization. In early 2026, lawmakers signaled the potential passage of a comprehensive AI law, the National Digital Economy and E-Governance Bill, which would govern high-risk systems by requiring impact assessments, creating regulatory sandboxes and providing increased enforcement authority to regulators. Nigeria released a Draft Code of Practice for AI in July 2025 to address ethics, bias and transparency.	→ Data Protection Commission → Federal Ministry of Communication, Innovation and Digital Economy → National Information Technology Development Agency → Nigerian Communications Commission	→ Nigeria Data Protection Regulation [IN FORCE] → Nigeria Data Protection Act [IN FORCE] → Copyright Act [IN FORCE] → Federal Competition and Consumer Protection Act [IN FORCE] → Cybercrimes Act [IN FORCE] → Communications Act [IN FORCE] → SEC Rule on Robo-Advisory Services [IN FORCE]	• Nigeria adopted UNESCO's Recommendation on the Ethics of AI. • Nigeria participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • In 2020, the Nigerian Communications Commission released a research paper on the ethical and societal impacts of AI. • The Director General of Nigeria's National Information Technology Development Agency called for strategic AI leadership through business integration and inclusive innovation. • Nigeria joined the countries endorsing the Paris Charter on Artificial Intelligence in February 2025. • Nigeria signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.

SAUDI ARABIA	Saudi Arabia has a National Strategy on Data and AI, which envisions a welcoming, flexible and stable regulatory ecosystem, including incentive schemes, to attract AI companies, investors and talents. According to the strategy, Saudi Arabia aspires to be one of the leading economies utilizing and exporting data and AI after 2030. The Saudi Data and AI Authority published AI Ethics Principles in September 2023. Moreover, Saudi Arabia is ready to leverage its "young and vibrant population" and "unique centralized ecosystem." The country hopes to attract outside investment by hosting global AI events and applying its influence as a tech hub within the Middle East. In April 2025, the Communications, Space and Technology Commission issued a draft law on AI aimed at fostering a collaborative environment and creating the concept of "data embassies."	→ Saudi Data and AI Authority → National Data Management Office → Ministry of Communications and Information Technology → Communication, Space Technology Commission	→ Personal Data Protection Law [IN FORCE] → Data Management and Personal Data Protection Standards [IN FORCE] → Children and Incompetents' Data Protection Policy [IN FORCE] → Data Classification Policy [IN FORCE] → General Rules for the Transfer of Personal Data outside the Geographical Borders of the Kingdom [IN FORCE] → Data Sharing Policy [IN FORCE] → Freedom of Information Policy [IN FORCE] → Open Data Policy [IN FORCE]	• Saudi Arabia is a party to the G20 AI Principles, which are drawn from the OECD's AI principles. See OECD AI principles and adherents. • Saudi Arabia adopted UNESCO's Recommendation on the Ethics of AI. • The government, in collaboration with the Saudi Data and AI Authority, signed a memorandum of understanding to create an AI center dedicated to the energy sector. • In January 2024, the Saudi Data and AI Authority published two guidelines, one for government employees, and one for the public. In September 2024, the SDAIA released for public comment a set of deepfakes guidelines. • In September 2024, the SDAIA signed a memorandum of understanding with the OECD to strengthen AI incident monitoring in the Middle East by enabling OECD monitoring tools to track data in Arabic. This measure ensures that Arabic-speaking nations can effectively leverage OECD's AI monitoring tools. • Later in September, the SDAIA partneredwith Microsoft to improve the availability of the SDAIA's Arabic LLM on Microsoft Azure and improve SDAIA's local talent initiatives.

SINGAPORE	Singapore updated its National AI Strategy in 2023, aiming to drive global innovation. Two key tenets to Singapore's AI policy are advancing the field and maximizing value creation, and raising up individuals, businesses and communities to use AI with confidence and trust. Singapore has developed numerous voluntary governance frameworks and initiatives for ethical AI deployment, data management and sectoral implementation, including: • Model AI Governance Framework for Generative AI. • Model AI Governance Framework. • Veritas Initiative, an implementation framework for AI governance in the financial sector. • AI Verify, a governance testing toolkit. • Project Moonshot, a LLM evaluation toolkit. • GenAI Sandbox for SMEs. • IPOS International, part of the Intellectual Property Office of Singapore that realizes customized IP solutions. • Proposed Advisory Guidelines on Use of Personal Data in AI Recommendation and Decision Systems. • Principles to Promote Fairness, Ethics, Accountability and Transparency in the Use of AI and Data Analytics in Singapore's Financial Sector. • Project MindForge, a framework on the responsible use of Gen AI in the Financial Sector. ↓	→ AI Verify Foundation → Smart Nation Digital Government Group → AI Ethics and Governance Steering Committee → Personal Data Protection Commission → Monetary Authority of Singapore → Infocomm Media Development Authority → Advisory Council on the Ethical Use of AI and Data → AI Safety Institute	→ Personal Data Protection Act [IN FORCE] → Computer Misuse Act [IN FORCE] → Copyright Act [IN FORCE] → Patents Act [IN FORCE] → Competition Act [IN FORCE] → Cybersecurity Act [IN FORCE] → Protection from Online Falsehoods and Manipulation Act [IN FORCE] → Road Traffic Act [IN FORCE] → The Digital Economy Partnership Agreement [IN FORCE]	• Singapore is a party to the OECD's AI principles. See OECD AI principles and adherents. • Singapore participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • Singapore also adopted UNESCO's Recommendation on the Ethics of AI. • An initiative to make Singapore and U.S. AI governance frameworks interoperable, known as the "crosswalk," was unveiled at the inaugural U.S.-Singapore Dialogue on Critical and Emerging Technologies. The crosswalk links IMDA's AI Verify with the U.S. National Institute of Standards and Technology's AI Risk Management Framework. • See the Primer to the Model AI Governance Framework. • See the Trusted Data Sharing Framework. • See the Guide to Job Redesign in the Age of AI. • Complementing the Model Framework and AI Verify are two volumes of a Compendium of Use Cases that show "how local and international organizations across different sectors and sizes implemented or aligned their AI governance practices with all sections of the Model Framework." - Volume 1 - Volume 2 • Singapore has signed a variety of agreements to cooperate on AI innovation and safety with Australia and the EU AI Office. • Singapore signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.

SINGAPORE, *continued*	• Implementation and Self-Assessment Guide for Organizations, a companion to the Model AI Governance Framework • Artificial Intelligence Model Risk Management, a review of banks' AI management practices • AI In Healthcare Guidelines • Guide on the Use of Generative AI Tools by Court Users • Agentic AI Primer • Starter Kit for Safety Testing of LLM-Based Applications [DRAFT]			• The AI Assurance Pilot, a global initiative to help codify emerging norms and best practices around technical testing of Generative AI applications, was launched by IMDA and the AI Verify Foundation. • Singapore hosted the Conference on AI and released the Singapore Consensus on Global AI Safety Research Priorities.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
SOUTH KOREA	The South Korean legislature passed the AI Basic Act, reinforced by enforcement decrees from the MSICT. As the second-enacted national AI comprehensive regulatory law, the legislation has been analyzed in comparison to the EU AI Act. While there are some similarities, such as provisions for greater transparency, prior notification to users, labeling of generative AI outputs and specific measures for high-risk AI systems, the law differs in important regards, especially in the types of AI systems targeted and the blanket obligations regardless of a system's place in the AI value chain. Read the IAPP's full analysis. South Korea has numerous policy initiatives regarding AI and technology under its National Strategy for AI, including the AI Research and Development Strategy, the Data Industry Activation Strategy and the System Semiconductor Strategy. The nation intends to leverage its high education level, widespread acceptance of new technology and preeminent IT infrastructure to implement these initiatives. Additionally, in August 2023, the Personal Information Protection Commission published guidance for the safe use of personal information in the age of AI.	→ Ministry of Science and ICT → Personal Information Protection Commission → Media and Communications Commission → Internet and Security Agency → Financial Services Commission → Fair Trade Commission → National Information Society Agency → Korea AI Association → AI Safety Institute	→ Personal Information Protection Act [IN FORCE] → Monopoly Regulation and Fair Trade Act [IN FORCE] → Copyright Act [IN FORCE] → Protection and Use of Location Information Act [IN FORCE] → Consumer Protection in Electronic Commerce Act [IN FORCE] → Promotion of Information and Communication Network Utilization and Information Protection Act [IN FORCE] → Credit Information Use and Protection Act [IN FORCE] → Product Liability Act [IN FORCE]	• South Korea adopted UNESCO's Recommendation on the Ethics of AI. • The Digital New Deal was created by the South Korean government to promote both educational and industrial efforts regarding AI opportunities. • See the AI Open Innovation Hub, a national AI development support platform. • South Korea published the draft Artificial Intelligence Privacy Risk Assessment and Management Model to provide guidance for companies looking to develop AI and a guide to synthetic data. • South Korea committed themselves to building out their AI infrastructure, including the world's highest-capacity AI data center. • South Korea has blocked LLM DeepSeek from operating across various ministries. • South Korea signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet.

TAIWAN	Taiwan has embraced a holistic approach to developing an AI environment. The government executive passed a draft of its AI Basic Act, which prioritizes innovation and technological advancement. The act largely follows a risk-based approach to regulating AI while also emphasizing data protection, consumer rights and transparency requirements. Taiwan's government has issued the following resources for policy guidance: • National Science and Technology Council's policy discussing AI innovation • AI Taiwan Action Plan • AI Taiwan Action Plan 2.0 • 2022 AI-Readiness Assessment Report	→ Fair Trade Commission → NSTC, previously the Ministry of Science and Technology → Ministry of Health and Welfare → Executive Yuan of Taiwan → Ministry of Digital Affairs → Industrial Technology Research Institute → Taiwan AI Center of Excellence	→ Personal Data Protection Act [IN FORCE] → Fair Trade Act [IN FORCE] → Cyber Security Management Act [IN FORCE] → Company Act [IN FORCE] → Child and Youth Sexual Exploitation Prevention Act [IN FORCE] → Copyright Act [IN FORCE] → Patent Act [IN FORCE] → Freedom of Government Information Law [IN FORCE] → Financial Technology Development and Innovative Experimentation Act [IN FORCE] → FinTech Regulatory Sandbox Guidance → MoST AI Technology Research and Development Guidelines → Guidelines on the use of Generative AI [DRAFT]	• See the Digital Nation and Innovative Economic Development Program. • See the 5+2 Innovative Industries Plan. • See Taiwan AI Labs. • See the country's Forward-looking Infrastructure Development Program. • See AI Literacy for All, a free education program to enhance AI literacy. • In November 2024, the U.S. Department of Commerce ordered Taiwan Semiconductor Manufacturing Company to cease shipping advanced microchips used in AI applications to Chinese customers after finding one such chip in a Huawei AI processor. In September 2025, the U.S. revoked TSMC's waiver to ship chip supplies to its facility in Nanjing, China. • Taiwan restricted the use of LLM DeepSeek by public agencies and critical infrastructure based on cybersecurity considerations, citing the fact that such use could violate Guidelines for the use of Generative AI.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
TURKEY	Turkey released a National AI Strategy in 2021. An AI bill was presented before Turkey's parliament in summer 2024. Turkey's Personal Data Protection Authority released Recommendations on the Protection of Personal Data in the Field of AI.	→ Personal Data Protection Authority → AI Commission → Information and Communications Technologies Authority → Capital Markets Board → Banking Regulation and Supervision Agency → Competition Authority	→ Law on Protection of Personal Data [IN FORCE] → Law on Consumer Protection [IN FORCE] → Criminal Code [IN FORCE] → Law on Regulating Electronic Commerce [IN FORCE] → Law on Industrial Property [IN FORCE]	• Turkey's Personal Data Protection Authority released Guidelines on Good Practices regarding the Protection of Personal Data in Banking Sector, which speaks to processing data through AI-based banking products. The DPA also published the Guidelines on Protection of Privacy in Mobile Applications, noting the importance of transparency and fairness in AI-based mobile apps. • In September 2023, Turkey's Advertising Board fined advertisers that referred to AI-generated information to promote their products.

UNITED ARAB EMIRATES, *continued*				• The UAE signed the AI Action Summit joint Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet. • In cooperation with the U.S. government, OpenAI, and others, the UAE launched Stargate UAE, an initiative to build frontier-scale compute capacity around the world. This is part of a broader US-UAE AI Acceleration Partnership to "bolster cooperation around critical technologies and ensure the protection of such technologies."

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
U.K.	The U.K. has delayed plans to regulate AI. A draft AI bill was reintroduced into the House of Lords, though such bills rarely become law. This follows a broader trend in Europe of balancing guardrails with innovation and competitiveness. Currently, the U.K. relies on existing sectoral laws to impose guardrails on AI systems. The following resources are available for policy guidance: • A pro-innovation approach to AI regulation • Algorithmic Transparency Recording Standard Hub • AI Standards Hub, a new U.K. initiative dedicated to the evolving and international field of standardization for AI technologies • Guide to using AI in the public sector • Guidance on understanding AI ethics and safety • The Centre for Data Ethics and Innovation's AI Governance research report. • Information Commissioner's Office's draft Guidance on the AI auditing framework • ICO and Alan Turing Institute's Explaining decisions made with AI • The AI Playbook for the UK Government, offering guidance to departments and public sector organizations for the safe and effective use of AI • The Data (Use and Access) Act, clarifying the use of data in models and has specific provisions for automated decision-making	→ Office for AI → Information Commissioner's Office → Digital Regulation Cooperation Forum → Financial Conduct Authority → AI Council → Department for Science, Innovation and Technology → AI Security Institute → Competition and Markets Authority → Ofcom → AI Advisory Panel	→ Equality Act [IN FORCE] → U.K. General Data Protection Regulations and Data Protection Act [IN FORCE] → Consumer Protection Act [IN FORCE] → Financial Services and Markets Act [IN FORCE] → Consumer Rights Act [IN FORCE] → National Security and Investment Act [IN FORCE] → Copyright, Designs and Patents Act [IN FORCE] → Advanced Research and Invention Agency Act [IN FORCE] → National Cyber Security Centre's Assessing intelligent tools for cyber security [IN FORCE] → Online Safety Act [IN FORCE] → Artificial Intelligence (Regulation) Bill [DRAFT]	• The U.K. is a party to the OECD's AI principles. See OECD AI principles and adherents. • In 2023, the country hosted the AI Summit, which led to the Bletchley Declaration. • The U.K. adopted UNESCO's Recommendation on the Ethics of AI. • As part of the G7, the U.K. endorsed the 11 Hiroshima Process International Guiding Principles for Advanced AI systems. • Specific action items include launching a national AI research and insights program, developing a diverse AI workforce, enabling better data availability, creating a national strategy for AI in health and social care, applying AI systems to climate change mitigation, piloting an AI standards hub to coordinate with global AI standardization, and developing a cross-government standard for algorithmic transparency. • The Centre for Data Ethics and Innovation published a Roadmap to an Effective AI Assurance Ecosystem, which is also part of the National AI Strategy. Further, the DSIT created a Portfolio of AI Assurance techniques to support the development of trustworthy AI. • See the U.K. AI Safety Institute. • Along with the U.S., Israel, the EU, and others, the U.K. signed onto the Council of Europe's Framework Convention on AI and human rights, democracy, and the rule of law.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
U.K., *continued*	• AI Opportunities Action Plan, signaling the U.K.'s intent to support AI development domestically • Guidance on AI Cyber Security Code of Practice • Ofcom's Open Letter regarding how the Online Safety Act applies to Generative AI • Harnessing Innovation and Growth Opportunities from AI Foundation Models			• The U.K. assessed DeepSeek for security implications. • Qatar and the U.K. will increase collaboration on AI research. • The U.K. seeks to build a frontier model champion to compete with foreign companies like OpenAI. • The U.K. endorsed a joint statement on data scraping and the protection of privacy with Canada.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
U.S. (FEDERAL)	The U.S. has been active in providing guidance to government organizations and private businesses while introducing legislation to target specific issues, such as deepfakes or discrimination. President Donald Trump revoked a 2023 executive order on AI and signed a new executive order detailing his administration's policy on AI. The new order seeks to remove barriers to AI development and stimulate innovation. Shortly thereafter, the new administration unveiled Stargate, a USD500 billion endeavor. In July 2025, the Trump administration released the AI Action Plan, which aims to accelerate AI innovation, build AI infrastructure and lead international AI diplomacy and security. In December 2025, President Trump signed an executive order that seeks to place a moratorium on AI laws at the state level. Other actions taken by the Trump administration include issuing two Office of Management and Budget memoranda, replacing earlier Biden administration-era memoranda. One affects federal use of AI and the other AI procurement. President Trump also signed an executive order regarding AI education and workforce development. The U.S. has been active in many of the multilateral agreements on AI as well. For example, it signed onto the Council of Europe's Framework Convention and promoted rulemaking at the U.N. At the state level, a handful of laws have passed, such as the Colorado AI Act (enforcement delayed), Utah's AI Policy Act and California's Transparency in Frontier AI Act, as well as bills that regulate AI in specific sectors, such as Illinois' HB 3773.	→ Office of Science and Technology Policy → National AI Initiative Office → Federal Trade Commission → Consumer Financial Protection Bureau → Department of Justice → Equal Employment Opportunity Commission → National Institute of Standards and Technology → Center for AI Standards and Innovation	→ FTC Act, Section 5 [IN FORCE] → Fair Credit Reporting Act [IN FORCE] → Equal Credit Opportunity Act [IN FORCE] → Title VII of the Civil Rights Act [IN FORCE] → Americans with Disabilities Act [IN FORCE] → Age Discrimination in Employment Act [IN FORCE] → Fair Housing Act [IN FORCE] → Genetic Information Nondiscrimination Act [IN FORCE]	• The U.S. is a party to the OECD's AI principles. See OECD AI principles and adherents. • The U.S. participated in the 2023 U.K. AI Summit, which led to the Bletchley Declaration. • The U.S. also adopted UNESCO's Recommendation on the Ethics of AI. • As part of the G7, the U.S. endorsed the 11 Hiroshima Process International Guiding Principles for Advanced AI systems. • In general, the U.S. approach to AI governance has been slow and incremental, seeking to preserve civil and human rights for Americans throughout AI deployment, as well as mobilize international collaboration which upholds democratic values and mutual advancement. • See the U.S. Center for AI Standards and Innovation. • U.S. Senate Committee on the Judiciary's Subcommittee on Privacy, Technology and the Law held a hearing on the legislation of AI. • The Bipartisan Senate Working Group on AI released a roadmap for AI policy. This document highlights the need to ensure enforcement of existing rules, tackle current threats not covered by legislation, such as the use of deepfakes in elections, prepare for long-term threats of AI use, and create a federal privacy legal framework. • The inaugural U.S.-Singapore CET Dialogue unveiled the "crosswalk" initiative, linking IMDA's AI Verify with NIST's AI Risk Management Framework.

	Specific AI governance law or policy	Relevant authorities	Other relevant laws and policies	Wider AI context
U.S. (FEDERAL), *continued*	While not an exhaustive list, the following federal laws and policies could place a compliance or regulatory burden on private businesses: Acts and bills: • AI Training Act [IN FORCE] • National AI Initiative Act (Division E, Sec. 5001) [IN FORCE] • AI in Government Act (Division U, Sec. 101) [IN FORCE] • TAKE IT DOWN Act [IN FORCE] • Create AI Act [DRAFT] • NO FAKES Act of 2025 [DRAFT] Nonbinding frameworks: • Blueprint for an AI Bill of Rights • National Institute of Standards and Technology AI Risk Management Framework • Guidance for Regulation of AI Applications Government initiatives: • Voluntary Commitments from Leading AI Companies to Manage the Risks Posed by AI • TTC Joint Roadmap on Evaluation and Measurement Tools for Trustworthy AI and Risk Management • Congressional AI effort of the Bipartisan Senate AI Working Group • National Security Commission on AI • Bipartisan legislative framework for AI announced by U.S. Sens. Richard Blumenthal, D-Conn., and Josh Hawley, R-Mo. • Bipartisan House Task Force Report on AI			• Along with the U.K., Israel, and others, the U.S. signed onto the Council of Europe's Framework Convention on AI and human rights, democracy and the rule of law. • The U.S. has sought to decouple its AI efforts from China, while looking to stymie China's AI industry by restricting the chips available for Chinese import. It surprised U.S. stakeholders when DeepSeek, a foundational model developer in China, released a model that was competitive with those from top U.S. developers. This development rasied questions about whether export restrictions were effective. To answer these questions, the U.S. Select Committee on the CCP released a report. In May 2025, the Bureau of Industry and Security rescinded the AI Diffusion Rule, which curbed access to AI chips; nonetheless, contemporaneous guidance suggests that national security concerns still underpin the Trump administration's chip policy. For example, in September 2025, the U.S. revoked TSMC's waiver to ship chip supplies to its facility in Nanjing, China. • The U.S District Court for the Northern District of California found that training an AI model on copyrighted works likely qualifies as fair use. However, the court also found that the storage of the same works in a central library only constitutes fair use if those works were obtained legally. • State efforts to restrict or regulate AI are in full swing, such as Texas Attorney General Ken Paxton's investigation into DeepSeek.

VIETNAM	Vietnam published a National AI Strategy in 2021, highlighting the nation's aim to become a center for innovation and development of AI solutions and applications. Vietnam places AI at the top of its list of strategic technologies. Notably, the Ministry of Science and Technology released an draft AI law in September 2025. The draft echoes the EU AI Act, with foundational principles like human-centrism, explainability, risk-based management and innovation promotion. The draft also includes regulations for general purpose AI and sets out distinctions based on an entity's place in the AI supply chain. See IAPP's full analysis here. Vietnam also adopted the Law on Digital Technology Industry, which has many implications for AI. For example, the DTI law classifies AI based on risk, sets out transparency requirements and creates incentives for AI research and development.	→ Ministry of Science and Technology → Ministry of Finance → National Innovation Center	• Personal Data Protection Law [IN FORCE] • Protection of Consumer Rights Law [IN FORCE] • Law on Intellectual Property [IN FORCE] • Labor Code [IN FORCE]	• The AI for Vietnam Foundation is dedicated to bridging research, education, and real-world AI applications to drive economic growth and improve the quality of life in Vietnam. • Vietnam's Ministry of Finance partnered with Google to equip local startups with the skills to build generative AI solutions.
